

TAILGUARD AI

An AI agent that buys downside protection

The user sets a loss scenario and spending limit. TailGuard selects a defined risk QQQ put spread and sends the order to Alpaca Paper.

Two Paper orders accepted by Alpaca

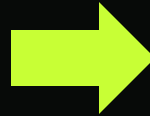

\$27 and \$12 maximum premium

What the product does

USER REQUEST

**Protect my portfolio from a 5% QQQ
selloff.
Spend no more than \$100.**

TAILGUARD RESULT

**Buy QQQ 681 put
Sell QQQ 666 put**

\$0.27 debit \$27 maximum cost

TailGuard reads the live QQQ option chain, rejects unsafe candidates, constructs an Alpaca multi leg order, and returns the broker receipt.

The language model interprets the mandate. Deterministic code chooses the contracts and price.

The user journey

01

Set the boundary

Choose a market drop and the most premium TailGuard may spend.

02

Run the protection cycle

TailGuard reads Alpaca account data, QQQ price, and the option chain.

03

Review the spread

The screen shows both legs, debit, maximum cost, and five policy checks.

04

Confirm the Paper order

A second explicit confirmation sends one capped multi leg order to Alpaca Paper.

OUTPUT

Broker order ID, status, timestamp, contract scan count, selected legs, and full JSON receipt

Alpaca Paper order test results

Both orders reached Alpaca and returned broker status accepted

Scenario	Long put	Short put	Limit	Alpaca status	Broker order
5% drop	QQQ 681	QQQ 666	\$0.27	ACCEPTED	95c4b8e8...cf99
8% drop	QQQ 660	QQQ 645	\$0.12	ACCEPTED	77359dc5...6260

\$39

combined maximum premium

0

contracts filled

CANCELED AFTER VERIFICATION

The test proved submission without leaving queued exposure.

How TailGuard limits risk

1

Defined risk spreads only

Every order pairs a long put with a lower strike short put. TailGuard never sends a naked option.

2

Premium capped before submission

The selected debit must fit the user budget. The two tests risked at most \$27 and \$12 in Paper funds.

3

Explicit Paper confirmation

Staging stays read only. Submission requires a server flag plus a confirmed request. Production returns to disabled after testing.

Paper trading only

No real money and no live brokerage endpoint
